Discovering Periodic Frequent patterns in Big Data Using PFPGrowthPlus Algorithm

In this tutorial, we will discuss two approaches to find Periodic Frequent patterns in big data using top algorithm.

- 1. **Basic approach:** Here, we present the steps to discover Periodic Frequent patterns using a single minimum support value
- 2. **Advanced approach:** Here, we generalize the basic approach by presenting the steps to discover Periodic Frequent patterns using multiple minimum support values.

Basic approach: Executing PFPGrowthPlus on a single dataset at a particular minimum support value

Step 1: Import the PFPGrowthPlus algorithm

In [1]: from PAMI.periodicFrequentPattern.basic import PFPGrowthPlus as alg

Step 2: Specify the following input parameters

```
In [2]: inputFile = 'temporal_T10I4D100K.csv'

minimumSupportCount=100 #Users can also specify this constraint between 0 to 1.
maxmunPeriodCount=500
seperator='\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\frac{\fr
```

Step 3: Execute the PFPGrowthPlus algorithm

In [3]: obj = alg. PFPGrowthPlus(iFile=inputFile, minSup=minimumSupportCount, maxPer=maxmunPelobj. startMine() #Start the mining process

periodic-frequent patterns were generated successfully using PFPGrowth++ algorithm

Step 4: Storing the generated patterns

Step 4.1: Storing the generated patterns in a file

In [4]: obj. savePatterns(outFile='periodicFrequentPatternsMinSupCount100.txt')

Step 4.2. Storing the generated patterns in a data frame

In [5]: periodicFrequentPatternsDF= obj.getPatternsAsDataFrame()

Step 5: Getting the statistics

Step 5.1: Total number of discovered patterns

2022/08/22 11:12 PFPGrouthPlus-st

```
In [6]: print('Total No of patterns: ' + str(len(periodicFrequentPatternsDF)))
    Total No of patterns: 229

Step 5.2: Runtime consumed by the mining algorithm

In [7]: print('Runtime: ' + str(obj. getRuntime()))
    Runtime: 5.00174355506897

In [8]: ##### Step 5.3: Total Memory consumed by the mining algorithm

In [9]: print('Memory (RSS): ' + str(obj. getMemoryRSS()))
    print('Memory (USS): ' + str(obj. getMemoryUSS()))
    Memory (RSS): 384573440
    Memory (USS): 345870336
```
